SENTARA HEALTH PLANS

PHARMACY PRIOR AUTHORIZATION/STEP-EDIT REQUEST*

<u>Directions</u>: <u>The prescribing physician must sign and clearly print name (preprinted stamps not valid)</u> on this request. All other information may be filled in by office staff; <u>fax to 1-800-750-9692</u>. No additional phone calls will be necessary if all information <u>(including phone and fax #s)</u> on this form is correct. <u>If the information provided is not complete, correct, or legible, the authorization process can be delayed.</u>

Drug Requested: Kerendia[®] (finerenone)

Member Name:		
Member Sentara #:		
Prescriber Signature:		
Phone Number:		
NPI #:		
DRUG INFORMATION: Authoriza	ation may be delayed if incomplete.	
Drug Name/Form/Strength:		
Dosing Schedule:	Length of Therapy:	
Diagnosis:	ICD Code, if applicable:	
Weight (if applicable):	Date weight obtained:	
Quantity Limit: 30 tablets per 30 days		

Kerendia® Initial Dosing Recommendations:

eGFR (mL/min/1.73m ²)	GFR (mL/min/1.73m ²) Starting Dose	
≥ 60	20 mg once daily	
\geq 25 to < 60	10 mg once daily	
< 25	Not Recommended	

(Continued on next page)

Dose Adjustment Based on Current Serum Potassium Concentration and Current Kerendia® Dose					
		10 mg once daily	20 mg once daily		
	≤ 4.8	Increase the dose to 20 mg once daily*	Maintain 20 mg once daily		
Current Serum	> 4.8 – 5.5	Maintain 10 mg once daily	Maintain 20 mg once daily		
Potassium (mEq/L)	> 5.5	Withhold Kerendia [®] . Consider restarting at 10 mg once daily when serum potassium ≤ 5.0 mEq/L	Withhold Kerendia®. Restart at 10 mg once daily when serum potassium ≤ 5.0 mEq/L		

^{*}If eGFR has decreased by more than 30% compared to previous measurement, maintain 10 mg dose.

CLINICAL CRITERIA: Check below all that apply. <u>All criteria must be met for approval</u>. To support each line checked, all documentation, including lab results, diagnostics, and/or chart notes, must be provided or request may be denied.

Initial Authorization: 6 months

- ☐ Member is 18 years of age or older and has a diagnosis of chronic kidney disease associated with type 2 diabetes
- ☐ Must submit lab test results documenting **BOTH** of the following obtained within the past 60 days
 - \square Members' current eGFR is > 25 mL/minute/1.73 m²
 - \square Member's current Urinary Albumin-to -Creatinine Ratio (UACR) is $\ge 30 \text{ mg/g}$
- □ Member's current serum potassium is \leq 5 mEq/L along with <u>BOTH</u> of the following (submit current lab documentation obtained within the past 60 days):
 - \Box Therapy will <u>NOT</u> be initiated if serum potassium >5 mEq/L
 - \Box Initiation with increased serum potassium monitoring during the first 4 weeks will be performed if serum potassium is > 4.8 to 5 mEq/L
- ☐ Member is established on treatment with maximally tolerated dose of angiotensin-converting enzyme inhibitor (ACE) or angiotensin receptor blocker (ARB) medication and will continue to take along with Kerendia® (finerenone)
- ☐ Member is established on standard therapy for treatment of type 2 diabetes
- ☐ Member is established on treatment with, or has a contradiction, or intolerance to, at least <u>ONE</u> sodium glucose transport protein 2 (SGLT2) inhibitor that is indicated for use in patients with chronic kidney disease (e.g., Farxiga[®], Jardiance[®])
- ☐ Member doses <u>NOT</u> have a diagnosis of adrenal insufficiency or a diagnosis of know significant non-diabetic renal disease, including clinically relevant renal artery stenosis
- ☐ Member is <u>NOT</u> receiving simultaneous treatment with strong CYP3A4 inhibitors
- □ For initial therapy, members will be dosed as follows:
 - \Box eGFR \geq 60 mL/minute/1.73 m²: starting dose will be 20 mg once daily
 - \Box eGFR \geq 25 to < 60 mL/minute/1.73 m²: starting dose will be 10 mg once daily

(Continued on next page)

Reauthorization: 12 months. Check below all that apply. <u>All criteria must be met for approval</u>. To support each line checked, all documentation, including lab results, diagnostics, and/or chart notes, must be provided or request may be denied.

Member continues to receive treatment with <u>ALL</u> the following unless contraindicated or not tolerated (must submit documentation of therapy contraindication or intolerance if applicable):		
☐ Maximally tolerated dose of angiotensin-converting enzyme inhibitor (ACE) or angiotensin receptor blocker (ARB) medication		
□ SGLT2 inhibitor medication		
□ Standard therapy for treatment of type 2 diabetes (unless member is using an SGLT2 inhibitor as monotherapy)		
Member's current eGFR is > 25 mL/minute/1.73 m ² (submit current lab documentation)		
Member has had a positive clinical response to therapy, such as decrease in Urinary Albumin-to-creatinine Ratio (UACR) from baseline level, improvement or stabilization of eGFR from baseline level stabilization of kidney function; etc. (submit current lab or medical chart note documentation)		
Member's current serum potassium level does <u>NOT</u> exceed 5.5 mEq/L (submit current lab documentation)		
Provider attests Kerendia [®] will be withheld if serum potassium is > 5.5 mEq/L and will consider restarting therapy when serum potassium normalizes (≤ 5.0 mEq/L)		

**Use of samples to initiate therapy does not meet step edit/ preauthorization criteria. **

*Previous therapies will be verified through pharmacy paid claims or submitted chart notes. *
