Sentara®

Looking at the data and listening to our communities

242,364 residents with 74.3% White, 12.7% African American, 6.3% Hispanic and 7.8% multiple races(U.S. Census Bureau).

Respondents reported health screenings, annual checkups, immunizations being important to their health.

Top health concerns are behavioral and mental health or both adults and children, chronic diseases, and social determinants of health.

Availability of services, wait lists and cost of services, make accessing healthcare difficult.

Leading causes of death:
- Cancer
- Heart disease
- Stroke

Behavioral and mental health outcomes continue to be a concern. Hospitalization rates due to substance use, opioid overdose and behavioral health diagnosis were higher than the state.

Some barriers to access health services were due to a lower number of primary care doctors and mental health doctors in some of our service areas.
