Reauthorization: 6 months. All criteria that apply must be checked for approval. To support each line checked, all documentation (lab results, diagnostics, and/or chart notes) must be provided or request may be denied. ☐ Member has previously received treatment with requested medication ☐ Provider attests to an absence of unacceptable toxicity from the drug (e.g., ocular symptoms related to hypovitaminosis A) ☐ Member has experienced a positive clinical response to therapy confirmed via chart notes (e.g., improve neurologic impairment, motor function, quality of life, slowing of disease progression) ☐ Member has documented disease response compared to pre-treatment baseline as evidenced by stabilization or improvement in at least ONE of the following (submit documentation):		☐ A baseline FAP Stage 1 or 2 (stage 1=ambulatory, stage 2=ambulatory with assistance)
 Inne checked, all documentation (lab results, diagnostics, and/or chart notes) must be provided or request may be denied. Member has previously received treatment with requested medication Provider attests to an absence of unacceptable toxicity from the drug (e.g., ocular symptoms related to hypovitaminosis A) Member has experienced a positive clinical response to therapy confirmed via chart notes (e.g., improve neurologic impairment, motor function, quality of life, slowing of disease progression) Member has documented disease response compared to pre-treatment baseline as evidenced by stabilization or improvement in at least <u>ONE</u> of the following (submit documentation): 		Member has NOT received a liver transplant
 Provider attests to an absence of unacceptable toxicity from the drug (e.g., ocular symptoms related to hypovitaminosis A) Member has experienced a positive clinical response to therapy confirmed via chart notes (e.g., improve neurologic impairment, motor function, quality of life, slowing of disease progression) Member has documented disease response compared to pre-treatment baseline as evidenced by stabilization or improvement in at least ONE of the following (submit documentation): 	line c	checked, all documentation (lab results, diagnostics, and/or chart notes) must be provided or request
 hypovitaminosis A) Member has experienced a positive clinical response to therapy confirmed via chart notes (e.g., improve neurologic impairment, motor function, quality of life, slowing of disease progression) Member has documented disease response compared to pre-treatment baseline as evidenced by stabilization or improvement in at least ONE of the following (submit documentation): 		Member has previously received treatment with requested medication
neurologic impairment, motor function, quality of life, slowing of disease progression) Member has documented disease response compared to pre-treatment baseline as evidenced by stabilization or improvement in at least ONE of the following (submit documentation):		
stabilization or improvement in at least ONE of the following (submit documentation):		Member has experienced a positive clinical response to therapy confirmed via chart notes (e.g., improved neurologic impairment, motor function, quality of life, slowing of disease progression)
☐ Signs and symptoms of neuropathy		
□ MRC muscle strength		
EXCLUSIONS TO MANAGEMENT OF THE PROPERTY OF TH		

EXCLUSIONS – Therapy will **NOT** be approved if member has history of any of the following:

- Hereditary transthyretin amyloidosis agents are considered experimental, investigational, or unproven for **ANY** other use including the following:
 - History of liver transplant
 - o Treatment of cardiomyopathy hATTR in absence of polyneuropathy symptoms
 - o Severe renal impairment or end-stage renal disease
 - Moderate or severe hepatic impairment
 - o New York Heart Association (NYHA) class III or IV heart failure
 - Sensorimotor or autonomic neuropathy not related to hATTR amyloidosis (e.g., monoclonal gammopathy, autoimmune disease)
 - Concurrent use of Tegsedi[®] (inotersen), Amvuttra[®] (vutrisiran), Onpattro[®] (patisiran), Vyndamax[®] (tafamidis), Vyndaqel[®] (tafamidis meglumine), or diflunisal
