Princess Anne Ambulatory Surgery Center
Community Health Needs Assessment
2013

SENTARA®

Princess Anne Ambulatory Surgery Center

Community Health Needs Assessment

Introduction

Princess Anne Ambulatory Surgery Center has conducted a community health needs assessment in collaboration with Sentara Princess Anne Hospital. The assessment provides us with a picture of the health status of the residents in our communities and provides us with information about health and health-related problems that impact health status.

Our assessment includes a review of population characteristics such as age, educational level, and racial and ethnic composition because these factors can impact health. The assessment also looks at risk factors like obesity and smoking and health indicators such as infant mortality and preventable hospitalizations. Community input is important so the assessment also includes survey results from local health departments, the school system, social services, community health centers, free clinics, local governments, and many others. In the following pages, additional information on the assessment process and findings can be found.

The needs assessment identifies numerous health issues that our communities face. While there are many important health matters, we are focusing our efforts on the health issues listed below. Considering factors such as size and scope of the health problem, the intensity and severity of the issue, the potential to effectively address the problem and the availability of community resources, and Sentara's mission "to improve health every day", we have identified these priority health problems in our area:

- Health promotion/prevention services
- Health insurance
- Adult/childhood obesity

The community health needs assessment was used as the foundation for a hospital implementation strategy to address these priority needs. The assessment and implementation strategy have been adopted by the facility's governing body. A number of resources are available in the community to address these needs through community partners such as the local health departments, United Way Agencies, and others. Information about these resources is available from sources like 2-1-1 Virginia and Sentara.com. Together, we will work to improve the health of the communities we serve.

Your input is important to us so that we can incorporate your feedback into our assessments. You may use our online feedback form available on the Sentara.com website. Thanks!

A Community Health Needs Assessment

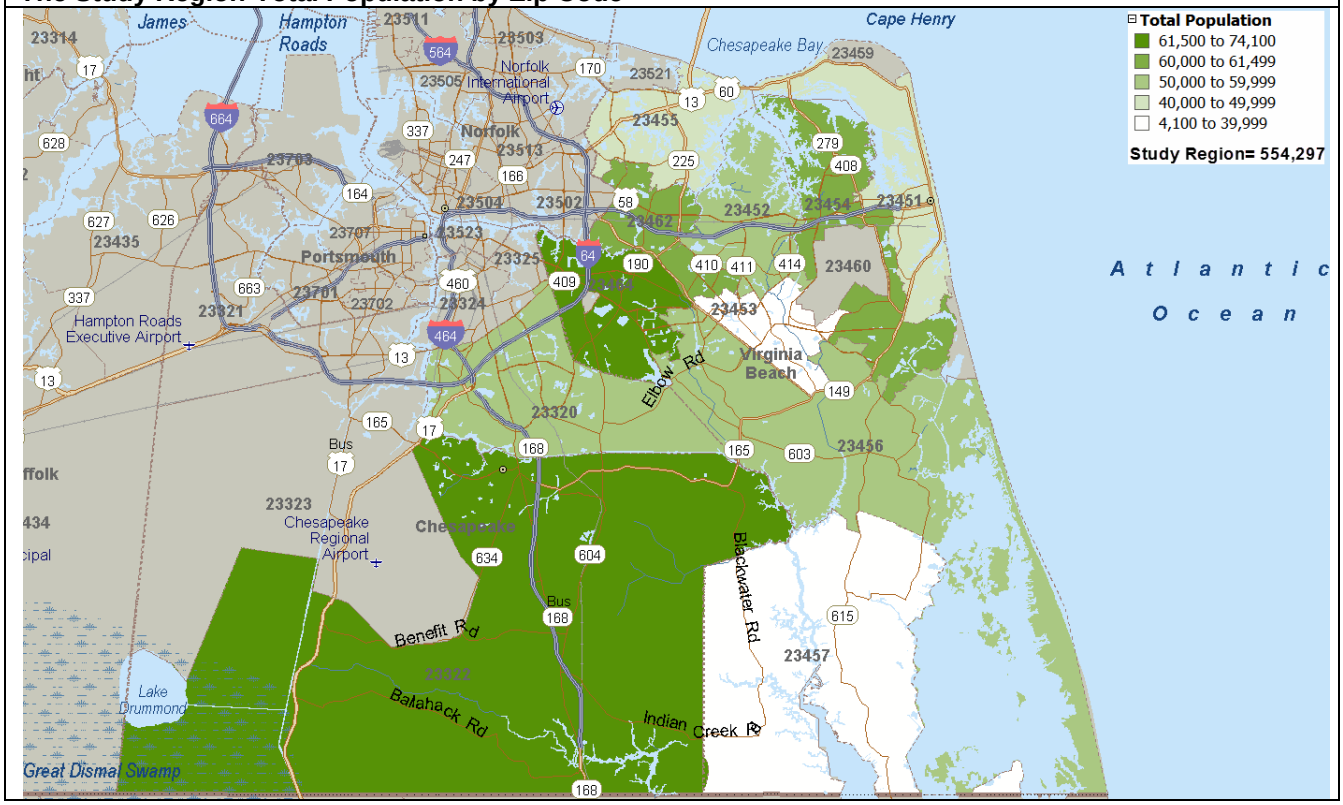
Executive Summary

The mission of the Sentara Princess Anne Hospital (SPAH) is "to improve health every day." With this mission in mind, SPAH commissioned Community Health Solutions to conduct this community health needs assessment.

The study focuses on the SPAH service area of 11 zip codes, most of which fall within the cities of Chesapeake and Virginia Beach. The study region is shown in the map below. The results of the study include two primary components: a 'community insight profile' based on qualitative analysis of a survey of community stakeholders, and a 'community indicator profile' based on quantitative analysis of community health status indicators. This Executive Summary outlines major findings, and details are provided in the body of the report.

The Study Region-Total Population by Zip Code



Part I. Community Insight Profile

In an effort to generate community input for the study, a 'Community Insight Survey' was conducted with a group of community stakeholders identified by SPAH. The survey participants were asked to provide their viewpoints on:

- Important health concerns in the community;
- Significant service gaps in the community; and
- Additional ideas or suggestions for improving community health.

The survey was sent to a group of community stakeholders identified by SPAH. A total of 56 stakeholders submitted a response (although not every respondent answered every question). The respondents provided rich insights about community health in the study region. To summarize:

- The respondents identified over 20 important health concerns such as obesity, chronic disease, depression, dental care/oral health for adults, Alzheimer's disease and more.

- The respondents reported more than two dozen specific community services in need of strengthening. Identified services included health care services for the uninsured/underinsured, aging services, behavioral health services, homeless services and more.

Twenty-one respondents offered open-ended responses with additional ideas and suggestions for improving community health. These responses are listed in *Appendix B*.

Part II. Community Indicator Profile

The community indicator profile in Part II presents a wide array of quantitative community health indicators for the study region. To produce the profile, Community Health Solutions analyzed data from multiple sources. By design, the analysis does not include every possible indicator of community health. The analysis is focused on a set of indicators that provide broad insight into community health, and for which there were readily available data sources. To summarize:

- *Demographic Profile.* As of 2012, the study region included an estimated 554,297 people. The population is expected to increase to 570,775 by 2017. It is projected that the population will remain stable or grow in all demographic groups, including a 12% increase in seniors age 65+; a 6% increase in the Asian population; a 4% increase in the Black/African American population; and a 4% increase in the Hispanic ethnicity population. Compared to Virginia as a whole, the study region is more densely populated, has generally higher income levels, and has (proportionally) fewer adults age 25+ without a high school diploma than Virginia as a whole.

- *Mortality Profile.* In 2011, the study region had 3,448 total deaths. The leading causes of death were malignant neoplasms (cancer), heart disease, and chronic lower respiratory diseases. The study region death rates per 100,000 population were higher than the statewide rates for the 0-17 and 65+ age groups.

- *Maternal and Infant Health Profile.* In 2011, the study region had 7,465 total live births. Compared to Virginia as a whole, the study region had a higher rate of live births; and a lower rate of births without early prenatal care, and a lower rate of non-marital births. Teen pregnancy and five-year infant mortality rates were higher in the City of Chesapeake than the statewide rates.

- *Preventable Hospitalization Discharge Profile.* The Agency for Healthcare Research and Quality (AHRQ) defines a set of conditions (called Prevention Quality Indicators, or 'PQIs') for which hospitalization should be avoidable with proper outpatient health care. High rates of hospitalization for these conditions indicate potential gaps in access to quality outpatient services for community residents. In 2011, residents of the study region had 4,693 PQI hospital discharges from Virginia hospitals. The leading diagnoses for these discharges were congestive heart failure, bacterial pneumonia and diabetes. The study region PQI discharge rate per 100,000 population was higher than the statewide rate for seniors age 65+.

- *Behavioral Health Hospitalization Discharge Profile.* Behavioral Health (BH) hospitalizations provide another important indicator of community health status. In 2011, residents of the study region had 4,430 hospital discharges from Virginia community hospitals for behavioral health conditions. [1] The leading diagnoses for these discharges were affective psychoses, general symptoms[2] and schizophrenic disorders. The study region behavioral health hospitalization discharge rates per 100,000 population were higher than the statewide rates for the 0-17,18-29, and 65+ age groups.

- *Adult Health Risk Profile.* Local estimates indicate that substantial numbers of adults (age 18+) in the study region have health risks related to nutrition, weight, physical inactivity, alcohol and tobacco. In addition, substantial numbers of adults have chronic conditions such as high cholesterol, high blood pressure, arthritis, diabetes and asthma.

- *Youth Health Risk Profile.* Local estimates indicate that substantial numbers of youth (age 14-19) in the study region have health risks related to nutrition, weight, alcohol, mental health, tobacco, and physical inactivity.

- *Uninsured Profile*. An estimated 59,660 (12%) nonelderly residents of the study region were uninsured at any point in time in 2012. This included an estimated 9,514 children and 50,146 adults.

[1] Data include discharges for Virginia residents from Virginia community hospitals reporting to Virginia Health Information, Inc. These data do not include discharges from state behavioral health facilities or federal (military) facilities. Data reported are based on the primary diagnosis.
[2] This diagnosis includes symptoms, signs, abnormal results of laboratory or other investigative procedures, and ill-defined conditions regarding which no diagnosis classifiable elsewhere is recorded.

- *Medically Underserved Profile.* Medically Underserved Areas (MUAs) and Medically Underserved Populations (MUPs) are designated by the U.S. Health Resources and Services Administration as being at risk for health care access problems. The designations are based on several factors including primary care provider supply, infant mortality, prevalence of poverty and the prevalence of seniors age 65+. The two localities that include the study region zip codes (the cities of Chesapeake and Virginia Beach) are partially designated as MUAs/MUPs.

Accompanying File of Zip Code-Level Indicators

This report includes community health indicators for the study region as a whole. A separate Microsoft Excel file contains indicators for each zip code within the study region.

Appendix A. Zip Code-Level Maps

Appendix A provides a set of thematically colored maps displaying variation in selected community health indicators by zip code. The underlying data for these maps are provided in a separate Microsoft Excel file. *Please read the important note about zip code-level data in Appendix A.*

Appendix B. Community Insight Profile- Additional Ideas and Suggestions for Improving Community Health

Twenty-one survey respondents offered open-ended responses with additional ideas and suggestions for improving community health. These responses are listed in *Appendix B*.

Appendix C. Data Sources

Appendix C provides a list of the data sources used in the analyses for this report.

Part I. Community Insight Profile

In an effort to generate community input for the study, a 'Community Insight Survey' was conducted with a group of community stakeholders identified by SPAH. The survey participants were asked to provide their viewpoints on:

- Important health concerns in the community;
- Significant service gaps in the community; and
- Additional ideas and suggestions for improving community health.

The survey was sent to a group of community stakeholders identified by SPAH. A total of 56 stakeholders submitted a response (although not every respondent answered every question). The respondents provided rich insights about community health in the study region. The results are summarized in the remainder of this section.

1. Survey Respondents

Exhibit I-1 below lists the organizational affiliations of the survey respondents.

Exhibit I-1
Reported Organization Affiliation of Survey Respondents

Access Partnership	Retired Navy
Alzheimer's Association (Southeastern VA Chap.)	RG Electric Company, Inc.
Auxiliary	Samaritan House
Beach Health Clinic	Senior Services of Southeastern Virginia
Browningstone Condominium Association	Sentara Medical Group (3)
Chesapeake Care, Inc./Hampton Roads Dental Center	Sentara Princess Anne Hospital (2)
Chesapeake Health Department	Sentara Princess Anne Hospital Auxiliary (3)
Chesapeake Redevelopment and Housing Authority	Sentara Princess Anne Hospital- Patient Advisory Council
Children's Specialty Group, PLLC	The Planning Council
Creeds Ruritan Club, Creeds ES, Senior Resource Center	United Way of South Hampton Roads
Eastern Virginia Medical School (3)	US Navy, Retired 32 Years
Emergency Physicians of Tidewater (2)	Virginia Beach Department of Human Services, MHSA
EMS Plaza #16	Virginia Beach Department of Public Health
Foodbank of SEVA	Virginia Beach EMS (2)
Manke	Virginia Beach General Hospital Auxiliary
Max Media	Virginia Beach United Methodist Church
Medical Transport	Volunteer
Norfolk State University	West Neck Community Association
Old Dominion University	West Neck HOA
People In Need Ministry	Williams Mullen
Prime Plus	YMCA of South Hampton Roads(2)
Princess Anne Hospital Auxiliary and Volunteer	*Unknown Organization (3)*

2. Community Health Concerns

Survey respondents were asked to review a list of common community health issues. The list of issues draws from the topics in *Healthy People 2020* with some refinements. The survey asked respondents to identify from the list what they view as important health concerns in the community. Respondents were also invited to identify additional issues not already defined on the list. *Exhibit I-2* summarizes the results, including open-ended responses.

Exhibit I-2.
Important Community Health Concerns Identified by Survey Respondents

Answer Options	Response Percent	Response Count
Adult Obesity	77%	43
Diabetes	70%	39
High Blood Pressure	68%	38
Heart Disease	66%	37
Cancer	61%	34
Childhood Obesity	55%	31
Depression	55%	31
Dental Care/Oral Health-Adult	52%	29
Alzheimer's Disease	50%	28
Stroke	50%	28
Mental Health Conditions (other than depression)	48%	27
Arthritis	39%	22
Substance Abuse - Illegal Drugs	39%	22
Alcohol Use	38%	21
Substance Abuse - Prescription Drugs	38%	21
Domestic Violence	34%	19
Tobacco Use	34%	19
Chronic Pain	30%	17
Orthopedic Problems	30%	17
Prenatal & Pregnancy Care	30%	17
Injuries	29%	16
Asthma	27%	15
Renal (kidney) Disease	27%	15
Teen Pregnancy	27%	15
Infant and Child Health	25%	14
Physical Disabilities	23%	13
Sexually Transmitted Diseases	21%	12
Dental Care/Oral Health-Pediatric	20%	11
Infectious Diseases	20%	11
Intellectual/Developmental Disabilities	20%	11
Respiratory Diseases (other than asthma)	20%	11
HIV/AIDS	18%	10
Neurological Disorders (seizures, multiple sclerosis)	18%	10
Autism	14%	8
Environmental Quality	7%	4

Note: When interpreting the survey results, please note that although the relative number of responses received for each item is instructive, it is not a definitive measure of the relative importance of one issue compared to another.

Exhibit I-2.
Important Community Health Concerns Identified by Survey Respondents (continued)

Other Important Community Health Concerns Identified by Survey Respondents in Open-Ended Responses	
Response #	**Responses**
1	Community Health!
2	From my vantage point, we are having an epidemic of substance use disorders, and severe mental health disorders without the needed resources for treatment. We are also witnessing concomitant health problems as a result of these illnesses and sometimes the treatment of them.
3	GI Problems
4	Vascular disease (e.g. PVD, aortic disease)
5	We need maximum push of education for early information and preventive measures in all areas of health. Beginning in the home and throughout secondary school training, if not done in the formative years, it may be too late. Quality, while seeking perfection all the time.

3. Community Service Gaps

Survey respondents were asked to review a list of community services that are typically important for addressing the health needs of a community. Respondents were asked to identify from the list any services they think need strengthening in terms of availability, access, or quality. Respondents were also invited to identify additional service gaps not already defined on the list. *Exhibit I-3* summarizes the results, including open-ended responses.

Exhibit I-3.
Important Community Service Gaps Identified by Survey Respondents

Answer Options	Response Percent[3]	Response Count
Health Care Services for the Uninsured and Underinsured	64%	33
Aging Services	60%	31
Behavioral Health Services (including mental health, substance use and intellectual disability)	56%	29
Homeless Services	56%	29
Dental Care/Oral Health Services-Adult	48%	25
Health Care Insurance Coverage (private and government)	48%	25
Long Term Care Services	37%	19
Social Services	35%	18
Transportation	35%	18
Early Intervention Services for Children	31%	16
Health Promotion and Prevention Services	31%	16
Home Health Services	31%	16
Cancer Services (screening, diagnosis, treatment)	29%	15
Chronic Pain Management Services	29%	15
Chronic Disease Services (including screening and early detection)	29%	15
Primary Health Care Services	27%	14
Public Health Services	27%	14
Food Safety Net (food bank, community gardens)	23%	12
Maternal, Infant & Child Health Services	21%	11
Dental Care/Oral Health Services-Pediatric	19%	10
Domestic Violence Services	19%	10
Family Planning Services	19%	10
Job/Vocational Retraining	19%	10
Patient Self Management Services(e.g. nutrition, exercise, taking medications)	19%	10
School Health Services	17%	9
Hospice Services	15%	8
Specialty Medical Care (e.g. cardiologists, oncologists, etc.)	12%	6
Workplace Health and Safety Services	10%	5
Pharmacy Services	8%	4
Hospital Services (including emergency, inpatient and outpatient)	6%	3
Physical Rehabilitation	6%	3
Environmental Health Services	4%	2

Note: When interpreting the survey results, please note that although the relative number of responses received for each item is instructive, it is not a definitive measure of the relative importance of one issue compared to another.

Continued on next page…

[3] *Fifty-two (52) of the 56 survey respondents answered this question.*

Exhibit 3.
Important Community Service Gaps Identified by Survey Respondents (continued)

Other Important Community Health Services Gaps Identified by Survey Respondents in Open-Ended Responses	
Response #	**Responses**
1	Community Health Clinics and services are in dire need! If you want to charge big bucks for the insured take care of the uninsured.
2	High quality mental health services are desperately needed in this region! Too many ER and primary care visits are complicated by mental health issues that personnel do not have the skills to address.
3	Mental health
4	We need a community aging service; we need a care service clinic for their daily health problems.

Part II. Community Indicator Profile

This section of the report provides a quantitative profile of the study region based on a wide array of community health indicators. To produce the profile, Community Health Solutions analyzed data from multiple sources. By design, the analysis does not include every possible indicator of community health. The analysis is focused on a set of indicators that provide broad insight into community health, and for which there were readily available data sources.

The results of this profile can be used to evaluate community health status compared Virginia overall. The results can also be helpful for determining the number of people affected by specific health concerns. In addition, the results can be used alongside the Community Insight Survey results and the zip code-level maps to help inform action plans for community health improvement. This section includes ten profiles as follows:

1. Health Demographic Trend Profile
2. Health Demographic Snapshot Profile
3. Mortality Profile
4. Maternal and Infant Health Profile
5. Preventable Hospitalization Discharge Profile
6. Behavioral Health Hospitalization Discharge Profile
7. Adult Health Risk Factor Profile
8. Youth Health Risk Factor Profile
9. Uninsured Profile
10. Medically Underserved Profile

1. Health Demographic Trend Profile

Trends in health-related demographics are instructive for anticipating changes in community health status. Changes in the size, age and racial/ethnic mix of the population can have a significant impact on overall health status, health needs and demand for local services.

As shown in *Exhibit II-1*, as of 2012, the study region included an estimated 554,297 people. The population is expected to increase to 570,775 by 2017. It is projected that the population will remain stable or grow in all age groups, including a 12% increase in seniors age 65+. Focusing on racial background, growth is projected for all populations, including a 6% increase in the Asian population and a 4% increase in the Black/African American population. The Hispanic ethnicity population is also expected to grow by 4%.

Exhibit II-1.
Health Demographic Trend Profile, 2010-2017

Indicator	2010 Census	2012 Estimate	2017 Projection	% Change 2012-2017
Total Population	544,032	554,297	570,775	3%
Population Density (per Sq Mile)	1,161.8	1,183.7	1,218.9	3%
Total Households	204,484	206,561	213,890	4%
Population by Age				
Children Age 0-17	132,331	131,071	131,865	1%
Adults Age 18-29	97,223	98,815	100,217	1%
Adults Age 30-44	112,038	112,939	116,034	3%
Adults Age 45-64	145,235	149,996	154,048	3%
Seniors Age 65+	57,202	61,482	68,612	12%
Population by Race/Ethnicity				
Asian	30,622	31,772	33,792	6%
Black/African American	106,676	109,091	112,939	4%
White	373,640	379,068	388,116	2%
Other or Multi-Race	33,096	34,368	35,929	5%
Hispanic Ethnicity[4]	33,136	34,426	35,844	4%

Source: Community Health Solutions analysis of US Census data and estimates from Alteryx, Inc. See Appendix C. Data Sources for details.

.

[4] Classification of ethnicity; therefore, Hispanic individuals are also included in the race categories.

2. Health Demographic Snapshot Profile

Community health is driven in part by community demographics. The age, sex, race, ethnicity, income and education status of a population are strong predictors of community health status and community health needs.

Exhibit II-2 presents a snapshot of key health-related demographics of the study region. As of 2012, the study region included an estimated 554,297 people. Focusing on population rates in the lower part of the Exhibit, compared to Virginia as a whole, the study region is more densely populated; has generally higher income levels, and has (proportionally) fewer adults age 25+ without a high school diploma than Virginia as a whole. *Note: Maps 1-13 in Appendix A show the geographic distribution of the population by zip code.*

Exhibit II-2.
Health Demographic Snapshot Profile, 2012

Indicator		Study Region	Virginia
Population Counts			
Total	Population	554,297	8,154,815
Age	Children Age 0-17	131,071	1,857,225
	Adults Age 18-29	98,815	1,375,674
	Adults Age 30-44	112,939	1,642,637
	Adults Age 45-64	149,996	2,233,940
	Seniors Age 65+	61,482	1,045,339
Sex	Female	282,443	4,148,680
	Male	271,855	4,006,135
Race	Asian	31,772	459,660
	Black/African American	109,091	1,579,659
	White	379,068	5,573,480
	Other or Multi-Race	34,368	542,016
Ethnicity	Hispanic Ethnicity[5]	34,426	655,986
Income	Low Income Households (Households with Income < $25,000)	26,577	553,382
Education	Population Age 25+ Without a High School Diploma	22,594	675,228
Population Rates			
Total	Population Density (pop. per sq. mile)	1,183.70	202.2
Age	Children Age 0-17 pct. of Total Pop.	24%	23%
	Adults Age 18-29 pct. of Total Pop.	18%	17%
	Adults Age 30-44 pct. of Total Pop.	20%	20%
	Adults Age 45-64 pct. of Total Pop.	27%	27%
	Seniors Age 65+ pct. of Total Pop.	11%	13%
Sex	Female pct. of Total Pop.	51%	51%
	Male pct. of Total Pop.	49%	49%
Race	Asian pct. of Total Pop.	6%	6%
	Black/African American pct. of Total Pop.	20%	19%
	White pct. of Total Pop.	68%	68%
	Other or Multi-Race pct. of Total Pop.	6%	7%
Ethnicity	Hispanic Ethnicity pct. of Total Pop.	6%	8%
Income	Per Capita Income	$32,513	$34,307
	Median Household Income	$67,189	$64,118
	Low Income Households (Households with Income < $25,000) pct. of Total Households	13%	18%
Education	Pop. Age 25+ Without a High School Diploma pct. of Total Pop. Age 25+	6%	12%

Source: Community Health Solutions analysis of US Census data and estimates from Alteryx, Inc. See Appendix C. Data Sources for details

[5] Classification of ethnicity; therefore, Hispanic individuals are also included in the race categories.

3. Mortality Profile

Mortality is traditionally one of the most important indicators of community health status. As shown in *Exhibit II-3*, in 2011, the study region had 3,448 total deaths. The leading causes of death were malignant neoplasms (cancer) (792), heart disease (710), and chronic lower respiratory diseases (183). The study region death rates per 100,000 population were higher than the statewide rates for the 0-17 and 65+ age groups.[6] *Note: Maps 14-17 in Appendix A show the geographic distribution of deaths by zip code.*

Exhibit II-3.
Mortality Profile, 2011

Indicator	Study Region	Virginia
Total Deaths		
Total Deaths by All Causes	3,448	60,325
Deaths by Top 14 Causes		
Malignant Neoplasms Deaths	792	14,261
Heart Disease Deaths	710	13,201
Chronic Lower Respiratory Diseases Deaths	183	3,097
Unintentional Injury Deaths	170	2,726
Cerebrovascular Diseases Deaths	157	3,327
Alzheimer's Disease Deaths	127	1,800
Diabetes Mellitus Deaths	90	1,628
Septicemia Deaths	86	1,372
Suicide Deaths	80	1,052
Influenza and Pneumonia Deaths	71	1,404
Nephritis and Nephrosis Deaths	53	1,425
Chronic Liver Disease Deaths	39	725
Pneumonitis Deaths	37	560
Primary Hypertension and Renal Disease	31	569
Deaths by Age Group		
Deaths Age 0-17	77	1,024
Deaths Age 18-29	73	1,080
Deaths Age 30-44	133	2,121
Deaths Age 45-64	682	12,338
Deaths Age 65+	2,483	43,758
Death Rates by Age Group (see note 6)		
Deaths per 100,000 pop. All Ages	631.3	742.9
Deaths per 100,000 pop. Age 0-17	58.0	53.6
Deaths per 100,000 pop. Age 18-29	74.7	79.0
Deaths per 100,000 pop. Age 30-44	118.2	125.7
Deaths per 100,000 pop. Age 45-64	467.5	576.8
Deaths per 100,000 pop. Age 65+	4,324.3	4,314.5

Source: Community Health Solutions analysis of mortality data from the Virginia Department of Health and local demographic estimates from Alteryx, Inc. See Appendix C. Data Sources for details.

[6] Age adjusted death rates were not calculated for this study because the study region is defined by zip codes, and available data are not structured to support calculation of age adjusted death rates at the zip code-level. Age group death rates are used as an alternative.

4. Maternal and Infant Health Profile

Along with mortality, maternal and infant health is another traditionally important indicator of community health status. As shown in *Exhibit II-4A,* in 2011, the study region had 7,465 total live births. Among these were 595 low weight births, 777 births without early prenatal care, 2,269 non-marital births and 363 births to teens. Compared to Virginia as a whole, the study region had a higher rate of live births overall; and a lower rate of births without early prenatal care and non-marital births. *Note: Maps 18-21 in Appendix A show the geographic distribution of births by zip code.*

Exhibit II-4A.
Maternal and Infant Health Profile, 2011

Indicator	Study Region	Virginia
Counts		
Total Live Births	7,465	102,525
Low Weight Births (under 2,500 grams / 5 lb. 8 oz.)	595	8,204
Births Without Early Prenatal Care (No Prenatal Care in First 13 Weeks)	777	13,500
Non-Marital Births	2,269	36,390
Live Births to Teens Age 10-19	363	6,572
Live Births to Teens Age 18-19	277	4,807
Live Births to Teens Age 15-17	84	1,708
Live Births to Teens Age <15	2	57
Rates		
Live Birth Rate per 1,000 Population	13.7	12.7
Low Weight Births pct. of Total Live Births	8%	8%
Births Without Early Prenatal Care (No Prenatal Care in First 13 Weeks) pct. of Total Live Births	10%	13%
Non-Marital Births pct. of Total Live Births	30%	35%

Exhibit II-4B below provides counts and rates of teen pregnancy and infant mortality for the two localities that include the study region. [7] Teen pregnancy and five-year infant mortality rates were higher in the City of Chesapeake than the statewide rates.

Exhibit II-4B.
Teen Pregnancy and Infant Mortality Profile, 2011

Indicator	Chesapeake, City of	Virginia Beach, City of	Virginia
Teen Pregnancy Counts and Rates			
Total Teenage Pregnancies Age 10-19 (2011)	339	515	9,630
Total Pregnancies per 1,000 Female Population Age 10-19 (2011)	20.9	18.4	18.6
Infant Mortality Counts and Rates			
Total Infant Deaths (2011)	16	43	685
Five-Year Average Infant Mortality Rate per 1,000 Live Births (2007-2011)	7.6	6.5	7.0

Source: Community Health Solutions analysis of data from the Virginia Department of Health. See Appendix C. Data Sources for details.

[7] Indicators are shown at the city and county level because teen pregnancy and five year average infant mortality data are not available at the zip code-level.

5. Preventable Hospitalization Discharge Profile

The Agency for Healthcare Research and Quality (AHRQ) defines a set of conditions (called Prevention Quality Indicators, or 'PQIs') for which hospitalization should be avoidable with proper outpatient health care.[8] High rates of hospitalization for these conditions indicate potential gaps in access to quality outpatient services for community residents.

As shown in *Exhibit II-5*, in 2011, residents of the study region had 4,693 PQI hospital discharges from Virginia hospitals.[9] The leading diagnoses for these discharges were congestive heart failure (1,123), bacterial pneumonia (831) and diabetes (772). The study region PQI discharge rate per 100,000 population was higher than the statewide rate for seniors age 65+. *Note: Map 22 in Appendix A shows the geographic distribution of PQI discharges by zip code.*

Exhibit II-5.
Prevention Quality Indicator (PQI) Hospital Discharge Profile, 2011

Indicator	Study Region	Virginia
PQI Discharges by Age Group (see note 8)		
All Ages	4,693	83,392
Total PQI Discharges-Age 0-17	17	335
Total PQI Discharges-Age 18-29	249	3,639
Total PQI Discharges-Age 30-44	420	7,190
Total PQI Discharges-Age 45-64	1,280	24,359
Total PQI Discharges-Age 65+	2,727	47,869
PQI Discharges by Diagnosis		
Congestive Heart Failure PQI Discharges	1,123	18,990
Bacterial Pneumonia PQI Discharges	831	16,221
Diabetes PQI Discharges	772	11,326
Urinary Tract Infection PQI Discharges	584	10,496
Chronic Obstructive Pulmonary Disease (COPD) PQI Discharges	553	11,439
Adult Asthma PQI Discharges	344	6,419
Dehydration PQI Discharges	173	3,401
Hypertension PQI Discharges	158	2,898
Perforated Appendix PQI Discharges	105	1,487
Angina PQI Discharges	50	715
PQI Discharge Rates by Age Group		
PQI Discharges per 100,000 pop. All Ages	859.2	1,027.0
PQI Discharges per 100,000 pop. Age 0-17	see note	17.5
PQI Discharges per 100,000 pop. Age 18-29	254.9	266.1
PQI Discharges per 100,000 pop. Age 30-44	373.3	426.0
PQI Discharges per 100,000 pop. Age 45-64	877.4	1,138.7
PQI Discharges per 100,000 pop. Age 65+	4,749.2	4,719.8

Source: Community Health Solutions analysis of hospital discharge data from Virginia Health Information, Inc. and local demographic estimates from Alteryx, Inc. See Appendix C. Data Sources for details

Note: Rates are not calculated when the number of cases is less than 30.

[8] The PQI definitions are detailed in their specification of ICD-9 diagnosis codes and procedure codes. Not every hospital admission for congestive heart failure, bacterial pneumonia, etc. is included in the PQI definition; only those meeting the detailed specifications. Low birth weight is one of the PQI indicators, but for the purpose of this report, low birth weight is included in the Maternal and Infant Health Profile. Also, there are three diabetes-related PQI indicators which have been combined into one for the report. For more information, visit the AHRQ website at www.qualityindicators.ahrq.gov/pqi_overview.htm

[9] Data include discharges for Virginia residents from Virginia community hospitals reporting to Virginia Health Information, Inc. These data do not include discharges from state behavioral health facilities or federal (military) facilities. Data reported are based on the primary diagnosis.

6. Behavioral Health Hospitalization Discharge Profile

Behavioral Health (BH) hospitalizations provide another important indicator of community health status. As shown in *Exhibit II-6*, in 2011, residents of the study region had 4,430 hospital discharges from Virginia hospitals for behavioral health conditions.[10] The leading diagnoses for these discharges were affective psychoses (1,969), general symptoms (734) and schizophrenic disorders (612). The study region behavioral health hospitalization discharge rates per 100,000 population were higher than the statewide rates overall and for the 0-17,18-29, and 65+ age groups. *Note: Map 23 in Appendix A shows the geographic distribution of BH discharges by zip code.*

Exhibit II-6.
Behavioral Health Hospital Discharge Profile, 2011

Indicator	Study Region	Virginia
BH Discharges by Age Group (see note 10)		
All Ages	4,430	64,892
Total BH Discharges-Age 0-17	587	7,996
Total BH Discharges-Age 18-29	959	12,297
Total BH Discharges-Age 30-44	926	15,063
Total BH Discharges-Age 45-64	1,292	19,677
Total BH Discharges-Age 65+	666	9,859
BH Discharges by Diagnosis		
Affective Psychoses [11]	1,969	27,277
General Symptoms [12]	734	11,135
Schizophrenic Disorders	612	8,042
Alcoholic Psychoses	233	3,283
Alcoholic Dependence Syndrome	131	2,161
Depressive Disorder, Not Elsewhere Classified	131	2,785
Drug Psychoses	129	1,321
Other Nonorganic Psychoses	123	2,148
Adjustment Reaction	82	2,123
Neurotic Disorders	71	1,351
BH Discharge Rates by Age Group		
BH Discharges per 100,000 pop. All Ages	811.1	799.2
BH Discharges per 100,000 pop. Age 0-17	442.3	418.4
BH Discharges per 100,000 pop. Age 18-29	981.8	899.0
BH Discharges per 100,000 pop. Age 30-44	823.1	892.4
BH Discharges per 100,000 pop. Age 45-64	885.7	919.8
BH Discharges per 100,000 pop. Age 65+	1,159.9	972.1

Source: Community Health Solutions analysis of hospital discharge data from Virginia Health Information, Inc. and local demographic estimates from Alteryx, Inc. See Appendix C. Data Sources for details.

[10] Data include discharges for Virginia residents from Virginia community hospitals reporting to Virginia Health Information, Inc. These data do not include discharges from state behavioral health facilities or federal (military) facilities. Data reported are based on the primary diagnosis.
[11] Includes major depressive, bipolar affective and manic depressive disorders.
[12] This diagnosis includes symptoms, signs, abnormal results of laboratory or other investigative procedures, and ill-defined conditions regarding which no diagnosis classifiable elsewhere is recorded.

7. Adult Health Risk Factor Profile

This section examines health risks for adults age 18+. Prevalence estimates of health risks, chronic disease and health status can be useful in developing prevention and improvement efforts. *Exhibit II-7* shows estimates indicating that substantial numbers of adults in the study region have health risks related to nutrition, weight, physical inactivity, alcohol and tobacco. In addition, substantial numbers of adults may have chronic conditions such as high cholesterol, high blood pressure, arthritis, diabetes and asthma. *Note: Maps 24-27 in Appendix A show the geographic distribution of selected adult health risks by zip code.*

Exhibit II-7.
Adult Health Risk Factor Profile (Estimates), 2012

Indicator	Study Region Estimates (Count)	Study Region Estimates (Percent)
Estimated Adults age 18+	423,232	100%
Risk Factors		
Less than Five Servings of Fruits and Vegetables Per Day*	328,143	78%
Overweight or Obese[13]	256,551	61%
Not Meeting Recommendations for Physical Activity in the Past 30 Days	217,321	51%
At Risk for Binge Drinking (males having five or more drinks on one occasion, females having four or more drinks on one occasion)	90,345	21%
Smoker*	82,773	20%
Chronic Conditions		
High Cholesterol (was checked, and told by a doctor or other health professional it was high)*	152,049	36%
High Blood Pressure (told by a doctor or other health professional)*	120,512	28%
Arthritis (told by a doctor or other health professional)*	99,079	23%
Diabetes (told by a doctor or other health professional)*	35,225	8%
Asthma (told by a doctor or other health professional)*	33,166	8%
General Health Status		
Limited in any Activities because of Physical, Mental or Emotional Problems*	81,375	19%
Fair or Poor Health Status*	68,615	16%

** Indicators marked (*) are based on respondent self reports. Other indicators are calculated by Centers for Disease Control based on Virginia Behavioral Risk Factor Behavioral Surveillance System results.*

Source: Estimates produced by Community Health Solutions using Virginia Behavioral Risk Factor Surveillance System data and local demographic estimates from Alteryx, Inc. See Appendix C. Data Sources for details.

[13] According to the CDC, for adults 20 years old and older, BMI is interpreted using standard weight status categories that are the same for all ages and for both men and women. Overweight is defined as a BMI between 25.0 and 29.9. Obesity is defined as a BMI 30.0 and above. For more information: http://www.cdc.gov/healthyweight/assessing/bmi/adult_bmi/index.html#Interpreted

8. Youth Health Risk Factor Profile

This section examines selected health risks for youth age 14-19. These risks have received increasing attention as the population of American children have become more sedentary, more prone to unhealthy eating and more likely to develop unhealthy body weight. The long-term implications of these trends are serious, as these factors place children at higher risk for chronic disease both now and in adulthood.

Exhibit II-8 shows estimates indicating that substantial numbers of youth in the study region have health risks related to nutrition, weight, physical activity, tobacco and alcohol and mental health. *Note: Maps 28-29 in Appendix A show the geographic distribution of selected youth health risks by zip code.*

Exhibit II-8.
Youth Health Risk Factor Profile (Estimates), 2012

Indicator	Study Region Estimates (Count)	Study Region Estimates (Percent)
Estimated Youth age 14-19	44,239	100%
Less than the Recommended Intake of Vegetables	38,981	88%
Less than the Recommended Intake of Fruit	38,178	86%
Overweight or Obese[14]	12,337	28%
Have at least One Drink of Alcohol at least One Day in the Past 30 Days*	13,102	30%
Feel Sad or Hopeless (almost every day for two or more weeks in a row so that they stopped doing some usual activities)*	10,966	25%
Used Tobacco in the Past 30 Days*	9,015	20%
Not Meeting Recommendations for Physical Activity in the Past Week*	6,585	15%

** Indicators marked (*) are based on respondent self reports. Other indicators are calculated by Centers for Disease Control based on Virginia Youth Risk Behavioral Surveillance System results.*

Source: Estimates produced by Community Health Solutions using Virginia Youth Risk Behavioral Surveillance System data and local demographic estimates from Alteryx, Inc. See Appendix C. Data Sources for details.

[14] For children and adolescents (aged 2–19 years), the BMI value is plotted on the CDC growth charts to determine the corresponding BMI-for-age percentile. Overweight is defined as a BMI at or above the 85th percentile and lower than the 95th percentile. Obesity is defined as a BMI at or above the 95th percentile for children of the same age and sex. For more information: http://www.cdc.gov/healthyweight/assessing/bmi/childrens_BMI/about_childrens_BMI.html

9. Uninsured Profile

Decades of research show that health coverage matters when it comes to overall health status, access to health care, quality of life, school and work productivity, and even mortality. *Exhibit II-9* shows the estimated number of uninsured individuals, by income as a percent of the federal poverty level (FPL), in the study region as of 2012. [15] An estimated 59,660 (12%) nonelderly residents of the study region were uninsured at a given point in time in 2012. This included an estimated 9,514 children and 50,146 adults. *Note: Maps 30-31 in Appendix A show the geographic distribution of the uninsured population by zip code.*

Exhibit II-9.
Uninsured Profile (Estimates), 2012

Indicator	Study Region
Estimated Uninsured Counts	
Uninsured Nonelderly Age 0-64	59,660
Uninsured Children Age 0-18	9,514
Uninsured Children <100% FPL	2,245
Uninsured Children 100-200% FPL	3,757
Uninsured Children 201-300% FPL	1,604
Uninsured Children 301%+ FPL	1,908
Uninsured Adults Age 19-64	50,146
Uninsured Adults <100% FPL	17,661
Uninsured Adults 100-200% FPL	14,177
Uninsured Adults 201-300% FPL	9,006
Uninsured Adults 301%+ FPL	9,301
Uninsured Adults Under 133% FPL [16]	19,341
Estimated Uninsured Rates	
Uninsured Nonelderly Percent	12%
Uninsured Children Percent	7%
Uninsured Adults Percent	14%

Source: Estimates produced by Community Health Solutions using the (2011) Profile of the Uninsured report produced for Virginia Health Care Foundation by the Urban Institute and local demographic estimates from Alteryx, Inc. See Appendix C. Data Sources for details.

[15] For more information, please see: http://aspe.hhs.gov/poverty/12poverty.shtml
[16] Uninsured Adults Under 133% FPL are included in the <100 and 100-200% FPL income categories. This separate income level has been included in the table to provide an estimate of uninsured adults who may be eligible for health coverage under Medicaid expansion.

10. Medically Underserved Profile

Medically Underserved Areas (MUAs) and Medically Underserved Populations (MUPs) are designated by the U.S. Health Resources and Services Administration as being at risk for health care access problems. The designations are based on several factors including primary care provider supply, infant mortality, prevalence of poverty and the prevalence of seniors age 65+.

As shown in *Exhibit II-10*, the two localities that include the study region (the cities of Chesapeake and Virginia Beach) are partially designated as MUAs/MUPs. For a more detailed description, visit the U.S. Health Resources and Service Administration designation webpage at http://muafind.hrsa.gov/.

Exhibit II-10.
Medically Underserved Area/Populations Profile

Locality	MUA/MUP Designation	Census Tracts
Chesapeake, City of	Partial	8 of 41 Census Tracts
Virginia Beach, City of	Partial	3 of 99 Census Tracts

Source: Community Health Solutions analysis of U.S. Health Resources and Services Administration data.

APPENDIX A. Zip Code-Level Maps for the Study Region

The maps in this section illustrate the geographic distribution of the study region population on key demographic and health indicators by zip code. The maps can also be used alongside the Community Insight Survey (Part I) and the Community Indicator Profile (Part II) to help inform plans for community health initiatives. The underlying data for these maps are provided in a separate Microsoft Excel file. The maps in this section include the following for 2011/2012:

1. Total Population, 2012	17. Chronic Lower Respiratory Diseases Deaths, 2011
2. Population Density (population per square mile), 2012	18. Total Live Births, 2011
3. Child Population Age 0-17, 2012	19. Low Weight Births, 2011
4. Senior Population Age 65+, 2012	20. Births Without Early Prenatal Care (No Prenatal Care in the First 13 Weeks), 2011
5. Asian Population, 2012	21. Births to Teen Mothers Under Age 18, 2011
6. Black/African American Population, 2012	22. Prevention Quality Indicator (PQI) Hospital Discharges, 2011
7. White Population, 2012	23. Behavioral Health (BH) Hospital Discharges, 2011
8. Other or Multi-Race Population, 2012	24. Estimated Adults Age 18+ Overweight or Obese, 2012
9. Hispanic Ethnicity Population, 2012	25. Estimated Adult Age 18+ Smokers, 2012
10. Per Capita Income, 2012	26. Estimated Adults Age 18+ with Diabetes, 2012
11. Median Household Income, 2012	27. Estimated Adults Age 18+ with High Blood Pressure, 2012
12. Low Income Households (Households with Income <$25,000), 2012	28. Estimated Youth Age 14-19 Overweight or Obese, 2012
13. Population Age 25+ Without a High School Diploma, 2012	29. Estimated Youth Age 14-19 Not Meeting Recommendations for Physical Activity in the Past Week, 2012
14. Total Deaths, 2011	30. Estimated Uninsured Children Age 0-18, 2012
15. Malignant Neoplasm (Cancer) Deaths, 2011	31. Estimated Uninsured Adults Age 19-64, 2012
16. Heart Disease Deaths, 2011	

Technical Notes

1. The maps focus on the Sentara Princess Anne Hospital (SPAH) service area of 11 zip codes, most of which fall within the cities of Chesapeake and Virginia Beach. Because zip code boundaries do not automatically align with city/county boundaries, there are some zip codes that extend beyond the city/county boundaries. Additionally, not all zip codes in cities of Chesapeake and Virginia Beach were identified as part of the SPAH study region.

2. With the exception of population density, per capita income and median household income, the maps show counts rather than rates. Rates are not mapped at the zip code-level because in some zip codes the population is too small to support rate-based comparisons.

3. The maps are thematically shaded to show the zip code-level indicators in five groupings or 'quintiles'.

4. Gray shading indicates either zip codes not included in the SPAH study region, or zero values for zip codes that are included in the SPAH study region. SPAH study region zip codes with zero values are noted.

APPENDIX B. Community Insight Profile- Additional Ideas and Suggestions for Improving Community Health

Survey respondents were given the option to submit additional ideas and suggestions for improving community health. The open-ended responses are listed below.

Response #	
1	Access Partnership has had a wonderful collaboration with Sentara Hospitals since the organization was established. I wish it was as easy to work with other divisions (SMG) as it is to work with the hospital division.
2	At SPA, we are "aware" of our patients' needs and we give support to the families of their loved one. We are two years old this month and we are very proud of our staff, volunteers and our administrators. We have dedicated and knowledgeable volunteers and the Auxiliary is a member of the team! Suggestion: be aware of what is around you as you enter all of the Sentara Hospitals. If there is an area of concern, tell someone who will be able to alert the staff to implement or review how to take care of their concern.
3	Bring your bus to the Senior Center!
4	Clinic for the aging.
5	Community programs to educate the older community.
6	Doctors need to be more accountable regarding time with patients, ordering only appropriate testing, and communicating with family members while patient is in the hospital as well as consulting with other doctors treating the patient which could save time and money.
7	Greater focus on Alzheimer's disease. Access to care and health professional training. It would be helpful to have a comprehensive GeroPsych unit providing specialized care and assessment for dementia. 1 out of 9, 65 years and older, will develop Alzheimer's disease.
8	Having a monthly newsletter go out to inform the public of your services and what is going on in the hospitals.
9	Hospital services, including: • discharge planning; setting up post discharge appointments for patients before discharge, and assessing safety prior to discharge • better communications between doctors and families during hospitalization • patient mobilization during hospitalization
10	I believe Sentara is cutting edge and provides our community high quality care.
11	• Increase staffing (nurses) on the floor. • Provide more mental health services. • Provide more community awareness and educational programs for childhood obesity prevention in consort with the local health departments.
12	Make your educational programs, like the ones on your in house TV system (TIGR), available on the Sentara website.
13	Provide educational resources to local recreational activities/organizations to help prevent injuries.
14	Strengthening the coordination of care, services and information sharing with partners would be helpful. As an example, a clinician of Sentara was diagnosed recently with Pertussis. Your institution then sent out letters to hundreds of patients stating that they might be at risk for Pertussis as they had recently seen this doctor. The patients were instructed to see their PCP if they had concerns or symptoms compatible with Pertussis. One of the patients did have symptoms and she went to her PCP office and showed them the letter. She was not seen that day. She was not given antibiotic treatment. She was told they did not perform the nasopharyngeal swab tests for Pertussis. She was not given any care. All this happened at her Sentara based PCP office. Ugh.
15	Support free clinics on various topics in every city.
16	The customer service at Sentara Princess Anne is outstanding.
17	To the extent not already done, EHR sharing with all area providers.

Continued on next page…

APPENDIX B. Community Insight Profile-Additional Ideas and Suggestions for Improving Community Health (continued)

18	• We are engaged in a Care Transitions pilot with Sentara Leigh using the Coleman model. The initial results show a decline in readmissions for the very limited number of patients who have participated. We think this pilot should be expanded to SNG, SVFG and SPA, in that order, using funds from the hospitals for the interventions. • We would also like to see greater linkages between the hospitals and Senior Services in support of chronic disease self-management community based classes. Thank you for the opportunity to respond.
19	We need to expand the community services so that care is provided where people live, work, play and worship. I think that faith-based partnerships could be expanded as well as expansion of partnerships with other school of health professions, particularly in the area of community outreach.
20	• We need to form partnerships in our community to assist with the increasing substance use disorders and lack of resources and believe that we need to set up some medical detoxification services and substance use disorders ERs and psychiatric ERs to better manage the growing numbers of these populations. • Medical clearance for TDOs is problematic and some joint lobbying needs to occur with the State Legislature to change the laws.
21	Work more closely with all area safety net clinics to provide in-kind services for low-income uninsured individuals. More funding through the Sentara Health foundation for health safety net clinics.

APPENDIX C. Data Sources

Section	Source
Part I:Community Insight Profile	
1) Survey Respondents 2) Community Health Concerns 3) Community Service Gaps 4) APPENDIX B. Community Insight Profile-Additional Ideas and Suggestions for Improving Community Health	Community Health Solutions analysis of *Community Insight* survey responses submitted by community stakeholders.
Part II: Community Indicator Profile	
1) Health Demographic Trend Profile 2) Health Demographic Snapshot Profile (also Appendix A: Maps 1-13)	Community Health Solutions analysis of US Census data and local demographic estimates from Alteryx, Inc. (2012 and 2017). Note that demographic estimates may vary from other sources of local demographic indicators.
3) Mortality Profile (also Appendix A: Maps 14-17)	Community Health Solutions analysis of Virginia Department of Health death record data and local demographic estimates from Alteryx, Inc (2011).
4) Maternal and Infant Health Profile (also Appendix A: Maps 18-21)	Community Health Solutions analysis of Virginia Department of Health birth record data and estimates from Alteryx, Inc (2011).
5) Preventable Hospitalization Profile (also Appendix A: Map 22) 6) Behavioral Health Hospitalization Profile (also Appendix A: Map 23)	Community Health Solutions analysis of hospital discharge data from the Virginia Health Information (VHI) dataset (January 1-December 31, 2011) and local demographic estimates from Alteryx, Inc. (2011). Data include discharges for Virginia residents from Virginia hospitals reporting to Virginia Health Information, Inc. These data do not include discharges from state behavioral health facilities or federal (military) facilities. Data reported are based on the patient's primary diagnosis. *NOTE: Virginia Health Information (VHI) requires the following statement to be included in all reports utilizing its data: VHI has provided non-confidential patient level information used in this report which was compiled in accordance with Virginia law. VHI has no authority to independently verify this data. By accepting this report the requester agrees to assume all risks that may be associated with or arise from the use of inaccurately submitted data. VHI edits data received and is responsible for the accuracy of assembling this information, but does not represent that the subsequent use of this data was appropriate or endorse or support any conclusions or inferences that may be drawn from the use of this data.*
7) Adult Health Risk Factor Profile (also Appendix A. Maps 24-27)	Estimates of chronic disease and risk behaviors for adults 18+ were produced by Community Health Solutions using: • A multi-year dataset (2006-2010)from the Virginia Behavioral Risk Factor Surveillance System (BRFSS).For more information on BRFSS visit: http://www.cdc.gov/brfss/about/index.htm • Local demographic estimates from Alteryx, Inc. (2012) Estimates are used when there are no primary sources of data available at the local level. The statistical model to produce the estimates was developed by Community Health Solutions. The estimates are for planning purposes only and are not guaranteed for accuracy. The table does not include a comparison to Virginia statewide rates because the local estimates were derived from state-level data. Differences between local rates and state rates may reflect estimation error rather than valid differences.

8) Youth Health Risk Factor Profile (also Appendix A. Maps 28)	Estimates of risk behaviors for children age 14-19 were produced by Community Health Solutions using: • Data from the Virginia Youth Risk Behavioral Surveillance System from the Centers for Disease Control (2011). For more information on YRBSS visit: http://www.cdc.gov/HealthyYouth/yrbs/index.htm • Local demographic estimates from Alteryx, Inc. (2012). Estimates are used when there are no primary sources of data available at the local level. The statistical model to produce the estimates was developed by Community Health Solutions. The estimates are for planning purposes only and are not guaranteed for accuracy. The table does not include a comparison to Virginia statewide rates because the local estimates were derived from state-level data. Differences between local rates and state rates may reflect estimation error rather than valid differences.
9) Uninsured Profile (also Appendix A. Maps 30-31)	Estimates of uninsured nonelderly age 0-64 were produced by Community Health Solutions using: • *The Profile of the Uninsured* report produced for Virginia Health Care Foundation by the Urban Institute (2011) • Local Demographic estimates from Alteryx, Inc. (2012) Estimates are used when there are no primary sources of data available at the local level. The statistical model to produce the estimates was developed by Community Health Solutions. The estimates are for planning purposes only and are not guaranteed for accuracy. The table does not include a comparison to Virginia statewide rates because the local estimates were derived from state-level data. Differences between local rates and state rates may reflect estimation error rather than valid differences.
10) Medically Underserved Profile	Community Health Solutions analysis of U.S. Health Resources and Services Administration data. For more information visit: http://muafind.hrsa.gov/.
