## CERVICAL CANCER SCREENING

### Common Chart Deficiencies:

- Documentation of 'sees OB/GYN' for pap/mammo.
- Lab results that explicitly state that the sample was '*inadequate*' do not count for this measure.
- A **reflex** HPV test performed on a **different date of service** following a cervical cytology test with an ASC-US or other unclear result does **not** count for this measure.
- Documentation of 'Hysterectomy' alone on Surgical History

### Tips to Improve HEDIS rate:

- Request results of breast and cervical cancer screenings from OB/GYN provider.
- Electronic Medical Records may provide a means to track gaps in care and reminders of needed services.

**Breast** Cancer Screening: Women 50-74 years of age, who had a mammogram to screen for breast cancer during 2017 or 2018.

**Cervical** Cancer Screening: Women 21-64 years of age who were screened for cervical cancer using either of the following criteria:

- ⇒ Women age 21-64 who had cervical cytology performed every 3 years (2016-2018)
- ⇒ Women age 30-64 who had cervical cytology/human papilloma virus (HPV) **co-testing** performed every 5 years (2014-2018)

NOTE: Documentation must include both the test date(s) and the result(s) or finding(s).

#### Exclusions:

- ⇒ **Breast Cancer Screening:**
  - Bilateral Mastectomy
  - Right and Left Unilateral Mastectomies
- ⇒ **Cervical Cancer Screening**
  - Vaginal or Abdominal Hysterectomy with no residual cervix (e.g., complete, total or radical hysterectomy)
