Description & Definitions:

Skin and Tissue Substitute graft products are temporary or permanent to aid in wound closure, promote healing, replace skin layers and protect affected area. Types of skin and tissue substitutes include but are not limited to the following:

- **Allogeneic**: produced from a person, other than the patients themselves.
- **Autologous**: produced from the patient's own body.
- **Composite**: produced from a mix of materials of various origins.
- **Synthetic**: produced from man-made materials.
- **Xenographic**: produced from non-human organisms /animals.

Labeled indication for product refers to the specific condition or disease that a product has been officially approved to treat and the frequency and duration of treatment which has been approved.

Episodes of care are the patient specific treatment to be provided over a defined period of time.

Treatment course refers to the planned sequence of interventions, prescribed duration of time and follow-up required to treat the specified health condition. A treatment course is expected to be no longer than 16 weeks.

Criteria:

Skin and tissue substitute grafts are considered a **medically necessary** treatment for **ALL** of the following indications**:**

- Application type for **1 or more** of the following:
  - **Initial Application of Skin and Tissue Substitute products** (original episode of care) for **ALL** of the following indications:

        - Documentation clearly stating current size of wound and size of wound after a standard conservative therapy
        - Initial request will be approved for a maximum of **1 application per week**
        - Initial Authorization of product is limited to **8 weeks** for the total of no more than **16 weeks**
        - Presence of a wound that has failed to improve (decrease of 50% wound area) after 1 one month of conservative therapy (such as surgical debridement, complete off-loading, and standard dressing changes, infection control with removal of foreign body or focus of infection, and appropriate nutrition)
        - The documentation includes smoking history, and counselling on the effect of smoking on wound healing. Treatment for smoking cessation and outcome of counselling (if applicable)
        - The individual will continue to receive treatment of systemic disease processes (eg venous insufficiency, lymphedema, and/or diabetes) and has been counseled on adherence to medical therapy for these conditions
        - The product to be applied per the labeled indication, for the requested medical condition listed below
    - **Continued Application of Skin and Tissue Substitute product** for **ALL** of the following indications:
        - Documentation of current size of wound with improvement noted
        - Continuation will be approved for a maximum of **1 application per week**
        - Continued Authorization of product is limited to an **additional 8 weeks** for the total of no more than **16 weeks**
        - The product continues to be applied per the labeled indication, for the requested medical condition listed below
    - **Subsequent Application of Skin and Tissue Substitute products** (additional episodes of care, past initial 16 weeks of treatment course) for **ALL** of the following indications:
        - Documentation of a previous application was successful (reduction in size of wound, improvement in granulation, epithelialization, and progress toward closure)
        - Treatment plan includes continued surgical debridement, complete off-loading, and standard dressing changes, Infection control with removal of foreign body or focus of infection, and appropriate nutrition
        - Clinical notes clearly document size of wound
        - The product to be applied per the labeled indication, for the requested medical condition listed below
        - The individual will continue to receive treatment of systemic disease processes (eg venous insufficiency, lymphedema, and/or diabetes) and has been counseled on adherence to medical therapy for these conditions
        - The documentation includes smoking history, and counselling on the effect of smoking on wound healing. Treatment for smoking cessation and outcome of counselling (if applicable)
        - Re-application treatment course requests will be approved for a total of no more than **8 applications of product in a 16 weeks period.**

The preceding codes are included above for informational purposes only and may not be all inclusive. Additionally, inclusion or exclusion of a treatment, procedure, or device code(s) does not constitute or imply member coverage or provider reimbursement. Please refer to the member's contract benefits in effect at the time of service to determine coverage or non-coverage of these services as it applies to an individual member.

Policy Approach and Special Notes: *

- Coverage
  - For skin substitutes used for breast reconstruction see refer to the policy Breast Procedures, Surgical 10.
  - See the appropriate benefit document for specific coverage determination. Member specific benefits take precedence over medical policy.

    - Preferred products are listed by medical condition below. The individual must try and fail or have a contraindication to at least two preferred products prior to seeking an alternative FDA approved product, at which time will be reviewed on a case-by-case basis by a Medical Director.
- Application to products
    - Policy is applicable to Sentara Health Plan Commercial products.
- Authorization requirements
    - Pre-certification by the Plan is required.
- Special Notes:
    - Medical policies can be highly technical and complex and are provided here for informational purposes. These medical policies are intended for use by health care professionals. The medical policies do not constitute medical advice or medical care. Treating health care professionals are solely responsible for diagnosis, treatment, and medical advice. Sentara Health Plan members should discuss the information in the medical policies with their treating health care professionals. Medical technology is constantly evolving, and these medical policies are subject to change without notice, although Sentara Health Plan will notify providers as required in advance of changes that could have a negative impact on benefits.
    - Services mean both medical and behavioral health (mental health) services and supplies unless We specifically tell You otherwise. We do not cover any services that are not listed in the Covered Services section unless required to be covered under state or federal laws and regulations. We do not cover any services that are not Medically Necessary. We sometimes give examples of specific services that are not covered but that does not mean that other similar services are covered. Some services are covered only if We authorize them. When We say You or Your We mean You and any of Your family members covered under the Plan. Call Member Services if You have questions.
