Sentara®

Looking at the data and listening to our communities

453,649 residents with 61.6% White, 39.8% African American, 8.9% Hispanic and 7.3% Asian (U.S. Census Bureau).

Respondents reported health screenings, annual checkups, immunizations being important to their health.

Top health concerns are behavioral and mental health or both adults and children, chronic diseases, and social determinants of health.

Availability of services, wait lists and cost of services, make accessing healthcare difficult.

Leading causes of death:
- Heart disease
- Cancer
- Stroke

Behavioral and mental health outcomes continue to be a concern. Suicidal ideation was a top behavioral health diagnosis seen in the emergency room.

Some barriers to access health services were due to a lower number of primary care doctors and mental health doctors in some of our service areas.
