DataPoint Tips:
Did You Know…

Tool Terminology

If you need help understanding the meaning of a term used in DataPoint, check the list of commonly used terms and definitions below.

Glossary

- **Account** – Allows you to see specific group details using the group and subgroup dimensions.

- **Advanced Filter** – A filter based on multiple dimensions by using "and/or" tools. View the "Filtering" flyer for more information.

- **Basic Filter** – A filter based on a single dimension. There are many different options for basic filters. View the "Filtering" flyer for more information.

- **Dashboard** – A collection of charts, tables, and lists that offer a high-level overview of your organization's key performance indicators (KPIs). Dashboards are customizable, enabling you to create displays that showcase your most important KPIs. In terms of the data hierarchy, dashboards represent the most general level of data.

- **Dimensions** – The parameters that form the rows and columns of the *Summary Report*. Dimensions allow you to build and filter reports. The dimensions you choose define how the data is categorized and can vary based on the report you are customizing.

- **Enable Lag Period** – Applies to timeframe filters and allows for claims runout to be captured. The typical lag period is set for two months based off of the incurred date/month dimension.

- **Metrics** – The units of measurement applied to your *Summary Report*.

- **Report** – A written interpretation of your data. In DataPoint, reports can be turned into charts, customized, exported, etc.

- **Rolling Date Range** – A specified timeframe to view as the calendar updates.
